Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

RSE::Core::AbstractDataObject
Data object which is designied in the way to be represented in a table easily
RSE::Viewers::AbstractGraphData
RSE::Core::Array < T >
Numerical array class
RSE::Core::Cable
Mechanical properties of a cable
RSE::Viewers::ConvergenceViewer
Class to represent convergence of viscosities
RSE::Core::Damper
Class to compute and collect properties of a damper
RSE::Core::DataBaseCables
Aggregate data of cables
RSE::Models::DoubleSpinBoxItemDelegate
Class to specify how table values can be edited
KLP::EnergyFrame
Energy quantities associated with a frame
KLP::FrameCollection
Set of all quantities belonged to a frame
$KLP::FrameObject < T > \dots \dots$
KLP::FrameObjectIterator< T >
Class to iterate through data of a record
RSE::Viewers::Graph
RSE::Models::GraphListModel
KLP::Index
Structure to navigate through records
KLP::IndexData
Data of each record
RSE::Core::IO
Class to save the project and solution data
RSE::Viewers::KinematicsGraphData
Class to deal with kinematics of KLP-data
RSE::Viewers::KLPGraphViewer
Class to graphically represent content of KLP output files
RSE::App::MainWindow
Central window of the program

Class Index

RSE::Core::Project	31
RSE::Viewers::PropertyTreeWidget	??
KLP::Result	
Class to aggregate all the records	32
KLP::ResultInfo	33
RSE::Models::ResultListModel	34
RSE::Core::RodSystem	34
RSE::Core::RodSystemParameters	
Parameters of a rod system	35
RSE::Models::RodSystemTableModel	
Table model to set and represent data of a rod system	35
RSE::Core::Array< T >::Row< U >	
Proxy class to acquire a row by index	36
RSE::Core::ScalarDataObject	
Scalar data object	37
RSE::Solution::SolutionManager	
Class to control the solution process	39
RSE::Solution::SolutionOptions	40
RSE::Viewers::SpaceTimeGraphData	
Class to deal with spacetime KLP-data	41
RSE::Core::Spans	
Computed parameters of spans	42
KLP::StateFrame	
Kinematic and dynamic quantities associated with a frame	42
RSE::Core::Support	
Class to aggregate data of supports	43
RSE::Core::VectorDataObject	
Vector data object	44

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/doublespinboxitemdelegate.cpp	
DoubleSpinBoxItemDelegate	47
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/doublespinboxitemdelegate.h	
DoubleSpinBoxItemDelegate	47
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/mainwindow.cpp	
Definition of the MainWindow class	48
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/mainwindow.h	
Declaration of the MainWindow class	49
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/rodsystemtablemodel.cpp	
Definition of the RodSystemTableModel class	52
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/rodsystemtablemodel.h	
Declaration of the RodSystemTableModel class	52
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/uiconstants.h	
Graphical constants shared between several widgets	53
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/abstractdataobject.cpp	
Implementation of the AbstractDataObject class	54
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/abstractdataobject.h	
Declaration of the AbstractDataObject class	55
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/aliasdata.h	
Specification of data types used in a project	56
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/array.cpp	
Implementation of the Array class	57
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/array.h	
Declaration of the Array class	58
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/constants.h	
Computational constants	60
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/damper.cpp	
Definition of the Damper class	61
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/damper.h	
Declaration the Damper class	62
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/databasecables.cpp	
Definition of the DataBaseCables class	63
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/databasecables.h	
Declaration of the DataBaseCables class	63
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/fileutilities.cpp	
Definition of utilites targeted to working with files	64

6 File Index

/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/fileutilities.h	
Declaration of utilities targeted to working with files	65
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/io.cpp	
Definition of the IO class	66
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/io.h	
Declaration of the IO class	66
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/project.cpp	
Definition of the Project class	67
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/project.h	
Declaration of the Project class	68
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/rodsystem.cpp	
Definition of the RodSystem class	70
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/rodsystem.h	
Declaration of the RodSystem class	71
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/scalardataobject.cpp	
Implementation of the ScalarDataObject class	72
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/scalardataobject.h	. –
Declaration of the ScalarDataObject class	72
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/solutionmanager.cpp	12
Definition of the SolutionManager class	73
· · · · · · · · · · · · · · · · · · ·	73
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/solutionmanager.h	74
Declaration of the SolutionManager class	74
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/solutionoptions.cpp	7-
Definition of the SolutionOptions class	75
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/solutionoptions.h	
Declaration of the SolutionOptions class	76
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/support.cpp	
Definition of the Support class	77
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/support.h	
Declaration of the Support class	77
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/vectordataobject.cpp	
Implementation of the VectorDataObject class	78
/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/vectordataobject.h	
Declaration of the VectorDataObject class	79

Chapter 4

Class Documentation

4.1 RSE::Core::AbstractDataObject Class Reference

Data object which is designied in the way to be represented in a table easily.

#include <abstractdataobject.h>

Inheritance diagram for RSE::Core::AbstractDataObject:

Public Types

enum ObjectType { kScalar , kVector , kMatrix , kSurface }

Public Member Functions

AbstractDataObject (ObjectType type, QString const &name)

Base constructor.

- virtual AbstractDataObject * clone () const =0
- virtual DataItemType & addItem (DataKeyType key)=0
- void removeltem (DataValueType key)

Remove the entity paired to the specified key.

- $\bullet \quad \text{bool } \textbf{changeItemKey} \text{ (DataKeyType oldKey, DataKeyType newKey, DataHolder } * items = \text{nullptr})$
 - Modify an existing key.
- bool **setArrayValue** (DataKeyType key, DataValueType newValue, IndexType iRow=0, IndexType iColumn=0) Set an array value with the specified indices.
- DataValueType **arrayValue** (DataKeyType key, IndexType iRow=0, IndexType iColumn=0)

 **Retrieve a value from an array.

- std::vector< DataKeyType > keys () const
 - Retrieve all the keys.
- quint32 numberItems () const
- DataHolder const & getItems ()
- DataIDType id () const
- ObjectType type () const
- QString const & name () const
- void **setName** (QString const &name)
- · virtual void serialize (QDataStream &stream) const
 - Serialize an abstract data object.
- virtual void deserialize (QDataStream &stream)
 - Partly deserialize an abstract data object.
- virtual void import (QTextStream &stream)=0
- · void write (QTextStream &stream) const

Write an abstract data object to a file.

Static Public Member Functions

- static DataIDType maxObjectID ()
- static void setMaxObjectID (DataIDType iMaxObjectID)

Protected Attributes

- const ObjectType mkType
- QString mName
- DataIDType mID
- DataHolder mltems

Static Private Attributes

• static DataIDType smMaxObjectID = 0

Friends

QDataStream & operator << (QDataStream & stream, AbstractDataObject const & obj)
 Print a data object to a binary stream.

4.1.1 Detailed Description

Data object which is designied in the way to be represented in a table easily.

4.1.2 Member Function Documentation

4.1.2.1 addltem()

Implemented in RSE::Core::ScalarDataObject, and RSE::Core::VectorDataObject.

4.1.2.2 clone()

```
virtual AbstractDataObject * RSE::Core::AbstractDataObject::clone ( ) const [pure virtual]
```

Implemented in RSE::Core::ScalarDataObject, and RSE::Core::VectorDataObject.

4.1.2.3 deserialize()

Partly deserialize an abstract data object.

It is assumed that a type and name have already been assigned. So, only an identifier and items need to be set.

4.1.2.4 import()

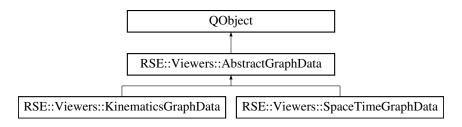

Implemented in RSE::Core::ScalarDataObject, and RSE::Core::VectorDataObject.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/abstractdataobject.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/abstractdataobject.cpp

4.2 RSE::Viewers::AbstractGraphData Class Reference

Inheritance diagram for RSE::Viewers::AbstractGraphData:

Public Types

```
    enum Category {
        cSpaceTime , cKinematics , cForce , cEnergy ,
        cModal , cEstimation }
    enum Direction { dFirst , dSecond , dThird , dFull }
```

Public Member Functions

- AbstractGraphData (Category category, Direction direction)
- virtual GraphDataset data (KLP::FrameCollection const &collection)=0
- Category category () const
- · Direction direction () const

Protected Member Functions

- GraphDataset **getAbsoluteData** (KLP::FloatFrameObject const components[]) Compute the module of specified components.
- GraphDataset **sliceDataByDirection** (KLP::FloatFrameObject const components[], Direction direction) Slice data through the specified direction.

Protected Attributes

- · Category mCategory
- · Direction mDirection

4.2.1 Member Function Documentation

4.2.1.1 data()

Implemented in RSE::Viewers::KinematicsGraphData, and RSE::Viewers::SpaceTimeGraphData.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/abstractgraphdata.h
- /home/ginterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/abstractgraphdata.cpp

4.3 RSE::Core::Array< T > Class Template Reference

Numerical array class.

```
#include <array.h>
```

Classes

class Row

Proxy class to acquire a row by index.

Public Member Functions

- Array (IndexType numRows=0, IndexType numCols=0)
- Array (Array < T > const & another)

Copy constructor.

Array (Array< T > &&another)

Move constructor.

- T * data ()
- void resize (IndexType numRows, IndexType numCols)

Resize and copy previous values if possible.

• void removeColumn (IndexType iRemoveColumn)

Remove a column by index.

void swapColumns (IndexType iFirstColumn, IndexType iSecondColumn)

Swap two columns.

· void clear ()

Remove all the values.

- IndexType rows () const
- IndexType cols () const
- IndexType size () const
- Row< T > operator[] (IndexType iRow)
- Row< T > operator[] (IndexType iRow) const
- Array & operator= (Array< T > const & another)

Assignment operator.

Private Attributes

IndexType mNumRows

Number of rows.

IndexType mNumCols

Number of columns.

T * mpData = nullptr

Pointer to the data stored.

Friends

```
• template<typename K >
```

QDebug **operator**<< (QDebug stream, Array< K > & array)

Print all array values using the matrix format.

• template<typename K >

QDataStream & operator<< (QDataStream & stream, Array< K > const & array)

Write an array to a binary stream.

• template<typename K >

QDataStream & operator>> (QDataStream &stream, Array< K > &array)

Read an array from a stream.

template<typename K >

QTextStream & operator << (QTextStream & stream, Array < K > const & array)

Write an array to a text stream.

4.3.1 Detailed Description

```
template < typename T> class RSE::Core::Array < T>
```

Numerical array class.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/array.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/array.cpp

4.4 RSE::Core::Cable Struct Reference

Mechanical properties of a cable.

```
#include <databasecables.h>
```

Public Attributes

· std::string name

Name of a cable.

• double bendingStiffness

Bending stiffness, N.

• double torsionalStiffness

Torsional stiffness, N.

• double massPerLength

Mass per length, kg/m.

• double youngsModulus

Youngs modulus, Pa.

• double area

Area of a cross-section, $m^{\wedge}2$.

4.4.1 Detailed Description

Mechanical properties of a cable.

The documentation for this struct was generated from the following file:

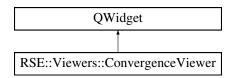

• /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/databasecables.h

4.5 RSE::Viewers::ConvergenceViewer Class Reference

Class to represent convergence of viscosities.

#include <convergenceviewer.h>

Inheritance diagram for RSE::Viewers::ConvergenceViewer:

Public Member Functions

- ConvergenceViewer (QString const &pathFile, QWidget *pParent=nullptr)
- void plot ()

Represent the convergence.

Private Member Functions

· void initialize ()

Initialize the widget.

• bool read ()

Read the file contained viscosities of dampers.

Private Attributes

- · QString const mkPathFile
- QCustomPlot * mpFigure
- QStringList mAvailableColors
- $\bullet \quad \text{QVector} < \text{QCPS} catter Style :: Scatter Shape > \textbf{mAvailableShapes}$
- QVector< int > mCalcModes
- Core::Array< double > mDampingValues

4.5.1 Detailed Description

Class to represent convergence of viscosities.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/convergenceviewer.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/convergenceviewer.cpp

4.6 RSE::Core::Damper Class Reference

Class to compute and collect properties of a damper.

```
#include <damper.h>
```

Public Member Functions

- **Damper** (double massCable, double massLoadedCable, double workingLength, double bouncerLength, double springLength=0, double springStiffness=0)
- · double massCable () const
- · double massLoadedCable () const
- · double workingLength () const
- · double bouncerLength () const
- · double springLength () const
- · double springStiffness () const
- void setMassCable (double massCable)
- void setMassLoadedCable (double massLoadedCable)
- void setWorkingLength (double workingLength)
- void setBouncerLength (double bouncerLength)
- void setSpringLength (double springLength)
- void setSpringStiffness (double springStiffness)
- void computeSpring ()

Compute parameters of a spring belonged to a damper.

Private Attributes

· double mMassCable

Mass of a cable, kg.

• double mMassLoadedCable

Mass of a cable with ice on it, kg.

· double mWorkingLength

Working length, m.

· double mBouncerLength

Length of a bouncer, m.

• double mSpringLength = 0.0

Length of a spring, m.

• double **mSpringStiffness** = 0.0

Spring stiffness, N/m.

4.6.1 Detailed Description

Class to compute and collect properties of a damper.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/damper.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/damper.cpp

4.7 RSE::Core::DataBaseCables Class Reference

Aggregate data of cables.

#include <databasecables.h>

Public Member Functions

- DataBaseCables (QString const &directory, QString const &fileName)
- std::vector< std::string > names () const Names of available cables.
- Cable const & getItem (std::string const &name) const

Private Member Functions

bool readDataBase (QString const &pathFile)
 Read a database from a file.

Private Attributes

std::unordered_map< std::string, Cable > mData

4.7.1 Detailed Description

Aggregate data of cables.

The documentation for this class was generated from the following files:

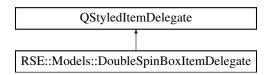

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/databasecables.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/databasecables.cpp

4.8 RSE::Models::DoubleSpinBoxItemDelegate Class Reference

Class to specify how table values can be edited.

#include <doublespinboxitemdelegate.h>

Inheritance diagram for RSE::Models::DoubleSpinBoxItemDelegate:

Public Member Functions

- DoubleSpinBoxItemDelegate (QObject *parent=nullptr)
- QWidget * createEditor (QWidget *parent, const QStyleOptionViewItem &option, const QModelIndex &index) const override

Create a double value editor.

• void setEditorData (QWidget *pEditor, const QModelIndex &index) const override

Specify data to show.

 void setModelData (QWidget *pEditor, QAbstractItemModel *pModel, const QModelIndex &index) const override

Set data to a model.

• void **updateEditorGeometry** (QWidget *pEditor, const QStyleOptionViewItem &option, const QModelIndex &index) const override

Set a geometry to render.

4.8.1 Detailed Description

Class to specify how table values can be edited.

The documentation for this class was generated from the following files:

- /home/ginterfly/Library/Projects/Current/RodSystemEstimator/src/central/doublespinboxitemdelegate.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/doublespinboxitemdelegate.cpp

4.9 KLP::EnergyFrame Struct Reference

Energy quantities associated with a frame.

#include <framecollection.h>

Public Attributes

- FloatFrameObject kinetic
- FloatFrameObject potential
- FloatFrameObject full

4.9.1 Detailed Description

Energy quantities associated with a frame.

The documentation for this struct was generated from the following file:

• /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/framecollection.h

4.10 KLP::FrameCollection Struct Reference

Set of all quantities belonged to a frame.

#include <framecollection.h>

Public Attributes

· int numRods

Number of rods.

· float time

Time.

FloatFrameObject parameter

Parameter.

FloatFrameObject naturalLength

Natural length.

- FloatFrameObject accumulatedNaturalLength
- FloatFrameObject coordinates [kNumDirections]

Coordinates.

· StateFrame state

Regular state.

StateFrame projectedState

Projected regular state.

StateFrame firstDerivativeState

First-order derivate of the state with respect to time.

• StateFrame secondDerivativeState

Second-order derivate of the state with respect to time.

• StateFrame errorState

State error.

• FloatFrameObject strain

Strain.

std::vector < StateFrame > modalStates

Set of modal states.

FloatFrameObject frequencies

Frequencies.

EnergyFrame energy

Energy.

4.10.1 Detailed Description

Set of all quantities belonged to a frame.

The documentation for this struct was generated from the following file:

• /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/framecollection.h

4.11 KLP::FrameObject < T > Class Template Reference

Public Types

• using iterator = FrameObjectIterator < T >

Public Member Functions

- FrameObject (T const *pData=nullptr, T normFactor=1.0, qint64 size=0, qint64 step=1)
- bool isEmpty () const
- qint64 size () const
- iterator begin () const
- iterator end () const
- iterator operator[] (int index) const

Private Attributes

- T const * mpData
- T mNormFactor
- qint64 mSize
- · qint64 mStep

Friends

template<typename K >
 QDebug operator<< (QDebug stream, FrameObject</p>
 K > &frameObject

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/frameobject.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/frameobject.cpp

4.12 KLP::FrameObjectIterator< T > Class Template Reference

Class to iterate through data of a record.

```
#include <frameobjectiterator.h>
```

Public Types

- using self_type = FrameObjectIterator< T >
- using iterator_category = std::random_access_iterator_tag
- using difference_type = std::ptrdiff_t
- using value_type = T
- using **pointer** = T const *
- using reference = T const &

Public Member Functions

- FrameObjectIterator (pointer pData, T normFactor, qint64 step)
- value type operator* ()
- self_type & operator++ ()
- self_type operator++ (int)
- self_type operator+ (const difference_type &movement)
- difference_type operator- (const FrameObjectIterator &another) const

Private Attributes

- · pointer mpData
- ⊤ mNormFactor
- · qint64 const mStep

Friends

- bool operator== (self_type const &first, self_type const &second)
- bool operator!= (self_type const &first, self_type const &second)

4.12.1 Detailed Description

```
template<typename T> class KLP::FrameObjectIterator< T>
```

Class to iterate through data of a record.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/frameobjectiterator.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/frameobjectiterator.cpp

4.13 RSE::Viewers::Graph Class Reference

Public Member Functions

- Graph (QString const &name)
- · QString const & name () const
- · GraphIDType id () const
- AbstractGraphData ** data ()
- · QCPGraph::LineStyle lineStyle () const
- uint lineWidth () const
- · QColor color () const
- QCPScatterStyle scatterStyle () const
- · double scatterSize () const
- void setName (QString const &name)
- void setData (AbstractGraphData *pXData=nullptr, AbstractGraphData *pYData=nullptr, AbstractGraphData *pZData=nullptr)

Specify data for all axes.

- void setLineStyle (QCPGraph::LineStyle const &lineStyle)
- void setLineWidth (uint lineWidth)
- void setColor (QColor const &color)
- void setScatterStyle (QCPScatterStyle const &scatterStyle)
- void setScatterSize (double scatterSize)

Static Public Member Functions

static GraphIDType maxGraphID ()

Private Member Functions

void setDirectionalData (AbstractGraphData *pData, int direction)

Set a new directional data and free the previous one.

Private Attributes

- · QString mName
- GraphIDType mID
- AbstractGraphData * mpData [KLP::kNumDirections] = {nullptr, nullptr, nullptr}
- QCPGraph::LineStyle mLineStyle = QCPGraph::IsLine
- uint **mLineWidth** = 1
- QColor mColor = Qt::blue
- QCPScatterStyle mScatterStyle = QCPScatterStyle::ssNone
- double mScatterSize = 5

Static Private Attributes

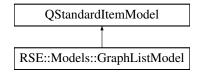

• static GraphIDType smMaxGraphID = 0

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/graph.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/graph.cpp

4.14 RSE::Models::GraphListModel Class Reference

Inheritance diagram for RSE::Models::GraphListModel:

Public Member Functions

- GraphListModel (Viewers::MapGraphs &graphs, QObject *pParent=nullptr)
- void create ()

Create a new default graph.

void updateContent ()

Create items linked to graphs.

void removeSelected ()

Remove selected graphs.

Private Member Functions

void clearContent ()

Remove all the items created.

• void renameItem (QStandardItem *pItem)

Rename a graph after editing.

Private Attributes

· Viewers::MapGraphs & mGraphs

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/graphlistmodel.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/graphlistmodel.cpp

4.15 KLP::Index Struct Reference

Structure to navigate through records.

```
#include <index.h>
```

Public Member Functions

• Index ()

Base constructor.

Public Attributes

- std::vector < IndexData > data
 Data.
- quint64 recordShift = 0

Shift of the main record.

• quint64 relativeDataShift = 0

Relative shift of data.

4.15.1 Detailed Description

Structure to navigate through records.

The documentation for this struct was generated from the following file:

• /home/ginterfly/Library/Projects/Current/RodSystemEstimator/src/klp/index.h

4.16 KLP::IndexData Struct Reference

Data of each record.

#include <index.h>

Public Attributes

• qint64 **position** = 0

Position of a record in the buffer.

• qint64 **size** = 0

Size of a record.

• qint64 **step** = 1

Step for iterating inside a record.

• qint64 **partSize** = 0

Partial length of a quantity inside a record.

4.16.1 Detailed Description

Data of each record.

The documentation for this struct was generated from the following file:

• /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/index.h

4.17 RSE::Core::IO Class Reference

Class to save the project and solution data.

```
#include <io.h>
```

Public Member Functions

- IO (QString const &lastPath)
- QString const & lastPath () const
- QString const & extension () const
- · void saveAs (QString const &pathFile, Project &project, Solution::SolutionOptions &options)

Save the project and solution data to a file.

• IOPair open (QString const &pathFile, DataBaseCables const &dataBaseCables)

Read the computational data from a file.

Private Attributes

- const QString mkProjectExtension = ".rse"
- QString mLastPath

4.17.1 Detailed Description

Class to save the project and solution data.

The documentation for this class was generated from the following files:

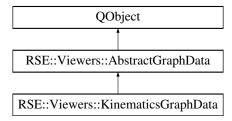

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/io.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/io.cpp

4.18 RSE::Viewers::KinematicsGraphData Class Reference

Class to deal with kinematics of KLP-data.

#include <kinematicsgraphdata.h>

Inheritance diagram for RSE::Viewers::KinematicsGraphData:

Public Types

enum KinematicsType {
 kStrain , kDisplacement , kRotation , kSpeed ,
 kAngularSpeed , kAcceleration , kAngularAcceleration }

Public Member Functions

- KinematicsGraphData (KinematicsType type, Direction direction=Direction::dFull)
- GraphDataset data (KLP::FrameCollection const &collection) override
 Retrieve the data of the specified type and direction from a given frame.
- KinematicsType type () const

Private Attributes

KinematicsType mType

Additional Inherited Members

4.18.1 Detailed Description

Class to deal with kinematics of KLP-data.

4.18.2 Member Function Documentation

4.18.2.1 data()

Retrieve the data of the specified type and direction from a given frame.

Implements RSE::Viewers::AbstractGraphData.

The documentation for this class was generated from the following files:

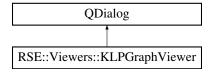

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/kinematicsgraphdata.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/kinematicsgraphdata.cpp

4.19 RSE::Viewers::KLPGraphViewer Class Reference

Class to graphically represent content of KLP output files.

```
#include <klpgraphviewer.h>
```

Inheritance diagram for RSE::Viewers::KLPGraphViewer:

Public Member Functions

- KLPGraphViewer (QString const &lastPath, QSettings &settings, QWidget *pParent=nullptr)
- void openResultsDialog ()

Open results using a file system dialog.

· void openResults (QStringList const &locationFiles)

Open a set of results using their locations.

• void **setGraphs** (MapGraphs &&graphs)

Replace the current set of graphs with the new one.

Private Member Functions

· void initialize ()

Intialize default graphical objects.

void createContent ()

Construct graphical interface.

ads::CDockWidget * createResultWidget ()

Create a widget to open and deal with KLP results.

ads::CDockWidget * createFigureWidget ()

Create a widget to plot graphs.

ads::CDockWidget * createConstructorWidget ()

Create a widget to construct graphs.

ads::CDockWidget * createPropertyWidget ()

Create a widget to modify properties of graphs.

void processSelectedResults ()

Process selected results.

void showResultInfo (KLP::ResultInfo const &info)

Show information about the selected result.

void processSelectedGraphs ()

Process selected graphs.

void saveSettings ()

Save settings to a file.

void restoreSettings ()

Restore settings from a file.

void closeEvent (QCloseEvent *pEvent) override

Save settings and delete handling widgets before closing the window.

Private Attributes

- · QString mLastPath
- QSettings & mSettings
- ads::CDockManager + mpDockManager = nullptr
- QCustomPlot * mpFigure
- QListView * mpListResults
- QTextEdit * mpTextInfo
- QListView * mpListGraphs
- RSE::Viewers::PropertyTreeWidget * mpPropertyTreeWidget
- RSE::Models::ResultListModel * mpResultListModel
- RSE::Models::GraphListModel * mpGraphListModel
- KLP::Results mResults
- · MapGraphs mGraphs

4.19.1 Detailed Description

Class to graphically represent content of KLP output files.

The documentation for this class was generated from the following files:

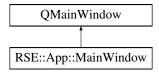

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/klpgraphviewer.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/klpgraphviewer.cpp

4.20 RSE::App::MainWindow Class Reference

Central window of the program.

#include <mainwindow.h>

Inheritance diagram for RSE::App::MainWindow:

Public Member Functions

- MainWindow (QWidget *parent=nullptr)
- void setMassCable (double value)

Set mass of a cable.

void setMassLoadedCable (double value)

Set mass of a cable with ice on it.

• void **setWorkingLength** (double value)

Specify working length.

• void setBouncerLength (double value)

Set length of a bouncer.

• void setSpringLength (double value)

Assingn length of a spring.

• void setSpringStiffness (double value)

Set spring stiffness of a damper.

• void **setCable** (QString const &name)

Assign cables to a rod system.

• void setForce (double value)

Specify stretching force.

• void **setLongitudinalStiffness** (double value)

Specify longitudinal stiffness of all supports.

· void setVerticalStiffness (double value)

Specify vertical stiffness of all supports.

• void createProject ()

Open a new project.

void openProjectDialog ()

Open a project by means of a dialog window.

· void openProject (QString const &pathFile)

Open a project using a path specified.

void saveAsProject ()

Save the project using a dialog window.

void saveProject ()

Save the current project.

Private Slots

void saveSettings ()

Save current graphical settings of floating widgets.

• void restoreSettings ()

Read graphical settings from a file.

• void computeSpring ()

Compute parameters of a spring.

void computeSpans ()

Compute length of all cables.

• void runRodSystemSolution ()

Solve the rod system.

void runOptimizationSolution ()

Optimize viscosities of dampers.

void appendOutputData (QByteArray const &data)

Process the message from the solution process.

void showConvergence ()

Represent the convergence of the optimization process.

void showResults ()

Represent the results obtained via KLPALGSYS.

void setProjectTitle ()

Set the name of a project.

void setProjectData ()

Set project data.

void setSolutionOptions ()

Set the data to be used as the solution parameters.

• void setCurrentCable ()

Select a current cable.

· void setBlockedSignals (bool)

(Un)Block all the signals from widget

• void aboutProgram ()

Show the information about the program.

Private Member Functions

· void initialize ()

Set the state and geometry of the central window.

• void createContent ()

Create all the widgets and links between them.

• void createDefaultProject ()

Create a default project.

void createDefaultSolutionOptions ()

Create default solution options.

void closeEvent (QCloseEvent *pEvent) override

Save settings and parameters of project while closing the central window.

ads::CDockWidget * createDamperWidget ()

Create a widget to specify data of a damper.

ads::CDockWidget * createRodSystemWidget ()

Create a widget to set and control data of a rod system.

ads::CDockWidget * createSupportWidget ()

Create a widget to specify data of supports.

ads::CDockWidget * createCalculationWidget ()

Create a widget to control the solution process.

ads::CDockWidget * createConsole ()

Construct a widget to view solution information.

void specifyMenuConnections ()

Specify menu interactions.

Private Attributes

- Ui::MainWindow * mpUi
- ads::CDockManager * mpDockManager
- Models::RodSystemTableModel * mpRodSystemTableModel
- Models::DoubleSpinBoxItemDelegate * mpDoubleSpinBoxItemDelegate
- QDoubleSpinBox * mpMassCable
- QDoubleSpinBox * mpMassLoadedCable
- QDoubleSpinBox * mpWorkingLength
- QDoubleSpinBox * mpBouncerLength
- QDoubleSpinBox * mpSpringLength
- QDoubleSpinBox * mpSpringStiffness
- QComboBox * mpNameCable
- QDoubleSpinBox * mpForce
- QDoubleSpinBox * mpLongitudinalStiffness
- QDoubleSpinBox * mpVerticalStiffness
- QSpinBox * mpNumCalcModes
- QSpinBox * mpNumDampModes
- QSpinBox * mpStepModes
- QDoubleSpinBox * mpTolTrunc
- QTextEdit * mpConsole
- RSE::Core::Project * mpProject
- RSE::Solution::SolutionManager * mpSolutionManager
- RSE::Solution::SolutionOptions * mpSolutionOptions
- RSE::Core::IO * mpIO
- QSharedPointer< QSettings > mpSettings

4.20.1 Detailed Description

Central window of the program.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/mainwindow.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/mainwindow.cpp

4.21 RSE::Core::Project Class Reference

Public Member Functions

- Project (QString const &name, DataBaseCables dataBaseCables, Damper damper, RodSystem rodSystem, Support support)
- QString const & name () const
- void setName (QString const &name)
- Damper & damper ()
- RodSystem & rodSystem ()
- Support & support ()
- DataBaseCables const & dataBaseCables () const
- void readTemplateData (QString const &path)

Read template data.

void writeCalcData (QString const &path, Solution::SolutionOptions const &options)

Write the computational data.

Private Member Functions

AbstractDataObject * addDataObject (AbstractDataObject::ObjectType type)

Create a data object with the specified type.

• void importDataObjects (QString const &path, QString const &fileName)

Import several data objects from a file.

void readProjectID (QString const &path)

Read the identifier of a project.

• void modifyScalarDataObjects ()

Modify scalar data objects.

void modifyVectorDataObjects (Spans const &spans)

Modify vector data objects.

• void writeDataObjects (DataObjects const &dataObjects, QString const &path, QString const &fileName)

Write data objects to a file.

• void writeRods (QString const &path, QString const &fileName)

Write data of rods.

void writeProgram (QString const &path, QString const &fileName, int numRods, int numCalcModes)
 Write data of a program.

Private Attributes

· QString mName

Name of a project.

Damper mDamper

Parameters of a damper.

RodSystem mRodSystem

Parameters of a rod system.

Support mSupport

Parameters of supports.

• DataBaseCables mDataBaseCables

Database of cables.

DataObjects mScalarDataObjects

Data objects.

- DataObjects mVectorDataObjects
- · int mProjectID

Project identifier.

· QStringList mRods

Content of the file named RODS.

QStringList mProgram

Content of the file name PROG.

Static Private Attributes

static const QString skProjectExtension

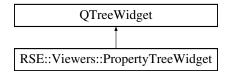

Project extension.

The documentation for this class was generated from the following files:

- /home/ginterfly/Library/Projects/Current/RodSystemEstimator/src/core/project.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/project.cpp

4.22 RSE::Viewers::PropertyTreeWidget Class Reference

Inheritance diagram for RSE::Viewers::PropertyTreeWidget:

Public Member Functions

- PropertyTreeWidget (QWidget *pParent=nullptr)
- void **setSelectedGraph** (PointerGraph pGraph)

Specify the single graph which properties need to be edited.

Private Member Functions

• void initialize ()

Intialize the widget and specify service data.

• void createHierarchy ()

Create a hierarchy of properties: keys and empty values.

void updateValues ()

Represent values of properties.

· void resetValues ()

Clear values of properties.

QTreeWidgetItem * createDirectionalDataItem (QString const &name)

Create a nested hierarchy of directional items.

• QTreeWidgetItem * createSliceDataItem (QString const &name)

Create a nested hierarchy of items to slice data.

QStringList getEnumKeys (QMetaObject const &metaObject, std::string const &nameEnumerator)

Retrieve translated keys from a meta object.

Private Attributes

- PointerGraph mpGraph = nullptr
- QMap< QString, QString > mEnumTranslator
- QList< QTreeWidgetItem * > mDataItems
- QList< QTreeWidgetItem * > mSliceDataItems
- QTreeWidgetItem * mpLineStyleItem
- QTreeWidgetItem * mpLineWidthItem
- QTreeWidgetItem * mpColorItem
- QTreeWidgetItem * mpScatterStyleItem
- QTreeWidgetItem * mpScatterSizeItem

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/propertytreewidget.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/propertytreewidget.cpp

4.23 KLP::Result Class Reference

Class to aggregate all the records.

```
#include <result.h>
```

Public Member Functions

- Result (QString const &pathFile)
- bool isEmpty () const
- std::vector< float > const & time () const
- · QString const & pathFile () const
- int numRods (qint64 iFrame) const

Get the number of rods associated with the requested frame.

- · gint64 numTotalRecords () const
- · qint64 numTimeRecords () const
- ResultInfo info () const

Retrieve general information about a result file.

• FrameCollection getFrameCollection (qint64 iFrame) const

Retrieve the collection of the frame objects.

· void update ()

Retrieve the updated content from the file.

Private Member Functions

· bool read ()

Read all the content of the file.

void buildIndex ()

Construct an object to navigate through records.

void setStateFrameData (StateFrame &state, RecordType type, qint64 iFrame, qint64 iStartData, std

 ::vector < float > const &normFactors) const

Specify state data for each direction.

FloatFrameObject getFrameObject (qint64 iFrame, RecordType type, float normFactor=1.0f, qint64 shift=0) const

Get the object associated with the requested frame.

Private Attributes

· QString const mkPathFile

Path to the KLP file.

QByteArray mContent

Content of the file.

std::vector < Index > mIndex

Index of the data buffer.

• qint64 mNumTotalRecords

Number of records.

std::vector< float > mTime

Time array.

· char mNumBytesRod

Number of bytes per rod.

4.23.1 Detailed Description

Class to aggregate all the records.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/result.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/result.cpp

4.24 KLP::ResultInfo Struct Reference

Public Attributes

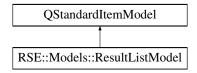

- QDateTime creationDateTime
- qint64 numTotalRecords = 0
- qint64 **numTimeRecords** = 0
- uint fileSize = 0
- uint **ID** = -1

The documentation for this struct was generated from the following file:

• /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/result.h

4.25 RSE::Models::ResultListModel Class Reference

Inheritance diagram for RSE::Models::ResultListModel:

Public Member Functions

- ResultListModel (KLP::Results &results, QObject *pParent=nullptr)
- · void updateData ()

Update results from files.

void updateContent ()

Create items linked to results.

void removeSelected ()

Remove selected results.

Private Member Functions

void clearContent ()

Remove all the items created.

Private Attributes

KLP::Results & mResults

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/resultlistmodel.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/resultlistmodel.cpp

4.26 RSE::Core::RodSystem Class Reference

Public Member Functions

- RodSystem (std::vector< double > distances, Cable const &cable, double force)
- std::vector< double > const & distances () const
- · std::string const & nameCable () const
- double force () const
- int numRods () const
- double massPerLength () const
- void setDistances (std::vector< double > const &distances)

Specify distances between supports.

void setCable (Cable const &cable)

Modify the cable used in the rod system.

- void setForce (double force)
- Spans computeSpans ()

Compute characteristics of spans.

Private Attributes

- RodSystemParameters mParameters
- std::string mNameCable

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/rodsystem.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/rodsystem.cpp

4.27 RSE::Core::RodSystemParameters Struct Reference

Parameters of a rod system.

#include <rodsystem.h>

Public Attributes

std::vector< double > distances

Distance between supports, m.

• double massPerLength

Mass per length, kg.

• double youngsModulus

Youngs modulus, Pa.

· double area

Area of a cross-section, m^2 2.

• double force

Stretching force, N.

• int numRods = 0

Number of rods.

4.27.1 Detailed Description

Parameters of a rod system.

The documentation for this struct was generated from the following file:

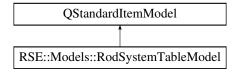

• /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/rodsystem.h

4.28 RSE::Models::RodSystemTableModel Class Reference

Table model to set and represent data of a rod system.

#include <rodsystemtablemodel.h>

 $Inheritance\ diagram\ for\ RSE:: Models:: RodSystem Table Model:$

Signals

• void modified ()

Public Member Functions

- RodSystemTableModel (QObject *pParent=nullptr)
- void setRodSystem (Core::RodSystem *pRodSystem)

Acquire the pointer to a rod system.

void updateContent ()

Represent all data of a rod system.

• void insertAfterSelected ()

Insert fresh rows after selected ones.

void removeSelected ()

Remove the selected rows.

Private Member Functions

• void clearContent ()

Remove all the objects created.

void setChangedData (QStandardItem *pItem)

Set the changed distances between supports.

Private Attributes

• Core::RodSystem * mpRodSystem = nullptr

4.28.1 Detailed Description

Table model to set and represent data of a rod system.

The documentation for this class was generated from the following files:

- $\bullet \ \ / home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/rodsystemtable model.h$
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/central/rodsystemtablemodel.cpp

4.29 RSE::Core::Array< T >::Row< U > Class Template Reference

Proxy class to acquire a row by index.

Public Member Functions

- Row (T *pData)
- T & operator[] (IndexType iCol)
- T const & operator[] (IndexType iCol) const
- T * data ()

Private Attributes

T * mpRow

4.29.1 Detailed Description

```
\label{eq:topename} \begin{tabular}{ll} template < typename U > \\ class RSE::Core::Array < T >::Row < U > \\ \end{tabular}
```

Proxy class to acquire a row by index.

The documentation for this class was generated from the following file:

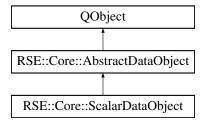

/home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/array.h

4.30 RSE::Core::ScalarDataObject Class Reference

Scalar data object.

```
#include <scalardataobject.h>
```

Inheritance diagram for RSE::Core::ScalarDataObject:

Public Member Functions

ScalarDataObject (QString const &name)

Construct a scalar data object.

∼ScalarDataObject ()

Decrease a number of instances while being destroyed.

• AbstractDataObject * clone () const override

Clone a scalar data object.

• DataItemType & addItem (DataValueType key) override

Insert a new item into ScalarDataObject.

· void import (QTextStream &stream) override

Import a scalar data object from a file.

Static Public Member Functions

• static quint32 numberInstances ()

Static Private Attributes

static quint32 smNumInstances = 0

Additional Inherited Members

4.30.1 Detailed Description

Scalar data object.

4.30.2 Member Function Documentation

4.30.2.1 addltem()

Insert a new item into ScalarDataObject.

Implements RSE::Core::AbstractDataObject.

4.30.2.2 clone()

```
AbstractDataObject * ScalarDataObject::clone ( ) const [override], [virtual]
```

Clone a scalar data object.

Implements RSE::Core::AbstractDataObject.

4.30.2.3 import()

Import a scalar data object from a file.

Implements RSE::Core::AbstractDataObject.

The documentation for this class was generated from the following files:

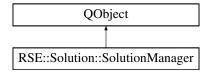

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/scalardataobject.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/scalardataobject.cpp

4.31 RSE::Solution::SolutionManager Class Reference

Class to control the solution process.

#include <solutionmanager.h>

Inheritance diagram for RSE::Solution::SolutionManager:

Public Slots

void stopSolution ()

Stop the solution process.

Signals

- void outputSent (QByteArray)
- void rodSystemSolved ()
- void optimizationSolved ()
- · void optimizationStepPerformed ()

Public Member Functions

- SolutionManager (QString const &rootPath, QString const &relativeInputPath, QString const &relative
 — OutputPath)
- void **solveRodSystem** (Core::Project &project, SolutionOptions const &options)

Solve a rod system.

void solveOptimization (Core::Project &project, SolutionOptions const &options)

Optimize viscosities of dampers as to damp selected set of modes.

• void runVisualizer ()

Run the visualizer of a rod system.

Private Member Functions

· void processRodSystemStream ()

Process the output of the rod system solver.

void processOptimizationStream ()

Process the optimization output.

• void runParserProcess ()

Prepare data for the optimization process.

- void writeOptimizationInput (QString const &pathFile, int numDampers, SolutionOptions const &options)

 Write the input data for optimization of viscosities.
- int getRodSystemStatus ()

Check if the solution process if finished.

Private Attributes

- QString mRootPath
- · QString mInputPath
- QString mOutputPath
- QProcess * mpRodSystemSolver = nullptr
- QProcess * mpOptimizationSolver = nullptr

4.31.1 Detailed Description

Class to control the solution process.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/solutionmanager.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/solutionmanager.cpp

4.32 RSE::Solution::SolutionOptions Class Reference

Public Member Functions

- SolutionOptions (int numCalcModes, int numDampModes, int stepModes, double tolTrunc)
- int numCalcModes () const
- int numDampModes () const
- int stepModes () const
- double tolTrunc () const
- void setNumCalcModes (int numCalcModes)
- void setNumDampModes (int numDampModes)
- void setStepModes (int stepModes)
- void **setTolTrunc** (double tolTrunc)

Private Attributes

• int mNumCalcModes

Number of computational modes.

int mNumDampModes

Number of modes to be damped.

int mStepModes

Step through computational modes.

• double mTolTrunc

Limit to truncate computational modes.

The documentation for this class was generated from the following files:

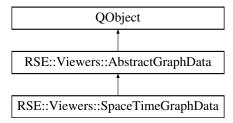

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/solutionoptions.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/solutionoptions.cpp

4.33 RSE::Viewers::SpaceTimeGraphData Class Reference

Class to deal with spacetime KLP-data.

#include <spacetimegraphdata.h>

Inheritance diagram for RSE::Viewers::SpaceTimeGraphData:

Public Types

enum SpaceTimeType {
 stTime , stParameter , stNaturalLength , stAccumulatedNaturalLength ,
 stCoordiante }

Public Member Functions

- SpaceTimeGraphData (SpaceTimeType type, Direction direction=Direction::dFull)
- GraphDataset data (KLP::FrameCollection const &collection) override

 Retrieve the data of the specified type and direction from a given frame.
- SpaceTimeType type () const

Private Attributes

SpaceTimeType mType

Additional Inherited Members

4.33.1 Detailed Description

Class to deal with spacetime KLP-data.

4.33.2 Member Function Documentation

4.33.2.1 data()

Retrieve the data of the specified type and direction from a given frame.

Implements RSE::Viewers::AbstractGraphData.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/spacetimegraphdata.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/viewers/spacetimegraphdata.cpp

4.34 RSE::Core::Spans Struct Reference

Computed parameters of spans.

```
#include <rodsystem.h>
```

Public Member Functions

• Spans (int numRods)

Public Attributes

- std::vector< double > u0
 - Constant at the left end.
- std::vector < double > uL

Constant at the right end.

- std::vector < double > L
 Length of a rod, m.
- double projectedForce

Projected stretching force, N.

4.34.1 Detailed Description

Computed parameters of spans.

The documentation for this struct was generated from the following file:

• /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/rodsystem.h

4.35 KLP::StateFrame Struct Reference

Kinematic and dynamic quantities associated with a frame.

```
#include <framecollection.h>
```

Public Attributes

- FloatFrameObject displacements [kNumDirections]
- FloatFrameObject rotations [kNumDirections]
- FloatFrameObject forces [kNumDirections]
- FloatFrameObject moments [kNumDirections]

4.35.1 Detailed Description

Kinematic and dynamic quantities associated with a frame.

The documentation for this struct was generated from the following file:

• /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/klp/framecollection.h

4.36 RSE::Core::Support Class Reference

Class to aggregate data of supports.

```
#include <support.h>
```

Public Member Functions

- Support (double longitudinalStiffness, double verticalStiffness)
- double longitudinalStiffness () const
- · double verticalStiffness () const
- void setLongitudinalStiffness (double longitudinalStiffness)
- void setVerticalStiffness (double verticalStiffness)

Private Attributes

· double mLongitudinalStiffness

Longitudinal stiffness (1), N/m.

• double mVerticalStiffness

Vertical stiffness (2), N/m.

4.36.1 Detailed Description

Class to aggregate data of supports.

The documentation for this class was generated from the following files:

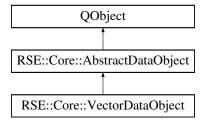

- /home/ginterfly/Library/Projects/Current/RodSystemEstimator/src/core/support.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/support.cpp

4.37 RSE::Core::VectorDataObject Class Reference

Vector data object.

#include <vectordataobject.h>

Inheritance diagram for RSE::Core::VectorDataObject:

Public Member Functions

• VectorDataObject (QString const &name)

Construct a vector data object.

∼VectorDataObject ()

Decrease a number of instances while being destroyed.

• AbstractDataObject * clone () const override

Clone a vector data object.

DataItemType & addItem (DataValueType key) override

Insert a new item into VectorDataObject.

void import (QTextStream &stream) override

Import a vector data object from a file.

Static Public Member Functions

• static quint32 numberInstances ()

Static Private Attributes

• static quint32 smNumInstances = 0

Additional Inherited Members

4.37.1 Detailed Description

Vector data object.

4.37.2 Member Function Documentation

4.37.2.1 addltem()

Insert a new item into VectorDataObject.

Implements RSE::Core::AbstractDataObject.

4.37.2.2 clone()

```
AbstractDataObject * VectorDataObject::clone ( ) const [override], [virtual]
```

Clone a vector data object.

Implements RSE::Core::AbstractDataObject.

4.37.2.3 import()

Import a vector data object from a file.

Implements RSE::Core::AbstractDataObject.

The documentation for this class was generated from the following files:

- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/vectordataobject.h
- /home/qinterfly/Library/Projects/Current/RodSystemEstimator/src/core/vectordataobject.cpp

Functions

- QDoubleSpinBox * createDoubleField (double value, double maxValue=1e3, int numDecimals=3)
 Create a field to input a floating-point number.
- QSpinBox * createIntegerField (int value, int maxValue=1000)

Create a field to input an integer.

Classes

```
    class RSE::Core::Array < T >
        Numerical array class.
```

class RSE::Core::Array< T >::Row< U >

Proxy class to acquire a row by index.

Typedefs

• using RSE::Core::IndexType = quint32

Functions

```
• template<typename K >
```

```
QDebug RSE::Core::operator<< (QDebug stream, Array< K > & array)
```

Print all array values using the matrix format.

• template<typename K >

```
\label{eq:QDataStream & RSE::Core::operator} \\ << (QDataStream & stream, Array < K > const & array) \\
```

Write an array to a binary stream.

• template<typename K >

```
QDataStream & RSE::Core::operator>> (QDataStream & stream, Array< K > & array)
```

Read an array from a stream.

template<typename K >

```
QTextStream & RSE::Core::operator<< (QTextStream & stream, Array< K > const & array)
```

Write an array to a text stream.
